MODULE CODE/TITLE: WEB DESIGN

Reg Number: 225084736

Year of Study: year 1

Date: 7/18/2026

PROJECT TECHNICAL REPORT

Project Title: Project's Hub

A Technical Analysis of a Static Web-Based Student–Investor Platform

Table of Contents

1. Chapter 1. Introduction
 - 1.1 Historical Background
 - 1.2 Problem Statement
 - 1.3 Project Objectives
 - 1.4 Expected Outcomes
 - 1.5 Project Rationale
 2. Chapter 2. System Analysis and Design
 - 2.1 System Analysis
 - 2.1.1 Intended Users
 - 2.1.2 Intended System Partners
 - 2.2 System Design
 - 2.2.1 High-Level Architecture
 - 2.2.2 UI Design and Flowcharts
 - 2.2.3 Database Design
 3. Chapter 3. Implementation
 4. Chapter 4. Conclusion and Recommendations
 5. Appendix
-

Chapter 1. Introduction

1.1 Historical Background

Project's Hub is a web application designed to connect student innovators with potential investors. The platform provides a marketplace where students can showcase innovative project ideas while investors browse featured projects and access project information through a clean and responsive interface. The application was developed as a static web demonstration, allowing the complete user experience to be showcased without requiring a backend server or database.

1.2 Problem Statement

Many student innovators have valuable project ideas but lack opportunities to present them to potential investors. Existing approaches often require complex systems that are difficult to demonstrate in academic settings. Project's Hub addresses this challenge by providing a simple web-based platform that demonstrates how students and investors can interact through a user-friendly interface.

1.3 Project Objectives

The objectives of Project's Hub are:

- Create a modern web page that promotes student-investor collaboration.
- Provide a simple investor login experience with form validation.
- Design an administrator dashboard for project approval and management.
- Demonstrate responsive and user-friendly interface design using HTML, CSS, and JavaScript.
- Showcase how the project can evolve into a complete full-stack application in the future.

1.4 Expected Outcomes

The expected outcomes of the project include:

- A responsive landing page.
- A functional investor login interface.
- A demonstration administrator dashboard.
- Dynamic loading of project information using JSON files.
- A prototype illustrating the concept of a student-investor marketplace.

1.5 Project Rationale (Importance to the Community)

The project demonstrates how web technologies can be used to promote collaboration between students and investors. It provides a foundation that can later be expanded into a real-world marketplace with authentication, databases, and advanced project management capabilities.

Chapter 2. System Analysis and Design

2.1 System Analysis

Project's Hub consists of three connected pages: the landing page, investor login page, and administrator dashboard. The system uses JSON files to populate content dynamically, making the application easier to maintain while demonstrating how future systems can integrate external data sources.

2.1.1 Intended Users

The intended users include:

- Student innovators
- Potential investors
- System administrators

2.1.2 Intended System Partners

By now we don't expect any system partners.

2.2 System Design

2.2.1 High-Level Architecture

The application follows a simple multi-page architecture.

The system consists of:

- Landing Page
- Investor Login Page
- Administrator Dashboard

HTML provides the page structure, CSS handles styling and responsiveness, JavaScript provides interactivity, and JSON files supply dynamic content. The pages are connected through relative links and can run locally without a server.

2.2.2 UI Design (Sketches) and Flowcharts

2.2.3 Database Design with ERD and Relationships

Chapter 3. Implementation

3.1 Introduction

Project's Hub was implemented using HTML5, CSS3, Vanilla JavaScript, and JSON files. HTML provides the structure, CSS provides styling, JavaScript enables interactivity, and JSON files dynamically populate project information. Google Fonts and Material Symbols were also incorporated to improve the user interface.

3.2 System Modules

3.2.1 Landing Page

The landing page presents the branding of Project's Hub together with featured project cards and call-to-action buttons that encourage user interaction.

FEATURED PROJECTS

Highly-vetted ventures ready for seed funding.

FILTER BY STATUS 

AI & Robotics

neural-path Logistics

Autonomous warehouse routing optimization using proprietary neural network architecture developed at MIT.

3.2.2 Investor Login Page

The login page validates that both email and password fields are completed before allowing submission. This demonstrates client-side form validation using JavaScript.

3.2.3 Administrator Dashboard

The administrator dashboard displays project statistics, recently submitted projects, and action buttons such as View, Approve, and Delete. These actions are simulated for demonstration purposes.

Chapter 4. Conclusion and Recommendations

4.1 Conclusion

Project's Hub successfully demonstrates a responsive and interactive web application that connects student innovators with potential investors. The system achieves its primary objectives by combining a modern interface, responsive design, JSON-driven content, and interactive front-end features. It also provides a strong foundation for future development into a complete full-stack application with authentication and database support.

4.2 Recommendations

To the Lecturer

Future implementations may include backend technologies, authentication systems, and database integration to demonstrate complete web application development.

To the School

Providing additional project development time in the lab would allow implementation of advanced features .

To Future Developers

The current system can be extended into a full-stack application by integrating a backend server, relational database, and secure authentication mechanisms.

To Users

Users should receive guidance on navigating the platform to maximize its usefulness when expanded into a production-ready system.
